

Topography Map

Land Cover / Land Use Statistics

At this time, approximately 76 % of the land area within the Abram Creek watershed has been developed. Medium-density residential housing occupies 44 % of the land area, while another 32 % is used for commercial, industrial, or institutional purposes, such as Cleveland Hopkins airport and the IX Center.

The remainder of the Abram Creek watershed, 24 %, is undeveloped. Undeveloped lands may include forested areas, open grass areas, ponds, or wetlands, and their uses may include agriculture or recreation.

Print Date: Dec., 2005

The Northeast Ohio Regional Sewer District has produced this watershed fact sheet using information gathered during the Regional Intercommunity Drainage Evaluation Study (RIDE Study). The purpose of this watershed fact sheet is to display planning-level data collected during the RIDE Study. The Northeast Ohio Regional Sewer District expressly disclaims any liability that may result from the use of the watershed fact sheets for any other purpose. For more information, please send all correspondence to the Northeast Ohio Regional Sewer District, 3900 Euclid Ave. Cleveland, OH 44115, Attn: Constance Haqq, Director of Communications & Community Relations, or contact our offices directly at (216) 881-6600.

Abram Creek

Getting to Know the Abram Creek Watershed

Community Map

Community Statistics

Abram Creek collects drainage from a 10.6 square-mile area, which includes portions of the following five communities before joining the Main Branch of the Rocky River...

Percentage of the Abram Creek Watershed Located within each Community

Berea	6.6%	Middleburg Heights	48.8%
Brook Park	31.3%	Parma Heights	0.2%
Cleveland	13.1%		

The Abram Creek Drainage Network

The RIDE Study identified 28 miles of total drainage serving the Abram Creek watershed, shown on the adjacent map as either intercommunity drainage (dark blue), or intracommunity drainage (light blue).

The intercommunity drainage system represents the network of sewers, culverts, and streams receiving flow from more than one community, whereas the intracommunity drainage system represents the local portions of the drainage network receiving storm water from a single community.
